1. Fan and Servo controlling 2

1. Fan and Servo controlling

Both the fan and servo are controlled with a PWM signal. In the STM32WB55 microcontroller, there are two timers capable of generating PWM signals. One of them is connected to the RGB LED, second is connected to the fan and servo.

Tab. 1: Assignment of pins for the fan and servo

GPIO no	element
PA0	Servo
PA1	Fan

In the stm32duino examples 1), there is a simple program which allows us to control a single LED with PWM. It is named “All-in-one_setPWM” 2). It uses hardware timer output connected directly to an LED.
